Testimonial L.S.M. Technologies

We enter our 1968 Ford Falcon in the "Variety the Children's Charity Bash NSW" and have completed 4 bashes raising approximately \$39,400 in total for children with special needs.

The Bash is an amazing motoring event for pre 1974 cars. The bash route distance average is about 4750km, mostly on substandard dirt roads, through national parks, forestry and private properties that would be mainly suited to four wheel drive vehicles. For some cars road side repairs include broken suspensions, shocky mounts ripped out, broken axles and radiators. But the frustrating issue we all have is dust entry. Although all door and boot seals have been replaced, it is incredible where the dust gets in. It even makes its way into the roof lining and drops out through the interior light. After a bit of research we approached L.S.M. Technologies to see if they could provide a solution for our problem.

It didn't take long for the boys at L.S.M. Technologies to work out what was needed, and provided us with a RESPA quality car air pressure filter system. The unit is compact, powerful and easy to install. The 2012 Variety Bash travelled about 2700km on dirt and dusty roads including Cape York. I was totally surprised how well the RESPA unit performed. No dust entry anywhere, not even in the boot. It was so good to finish the day on dusty roads nice and clean and no dust on or in our bags in the boot. Judging from the interest in the unit from other entrants, I reckon L.S.M Technologies will be getting a few more enquiries.

I can only imagine how beneficial the RESPA units would be in the mining, earthmoving and transport industries operating in severe conditions, not only preventing dust entering the cabins but also filtering the outside air while pressuring the cabin.

Regards

Bob Shackell Transport
